FOREWORD

Prince Edward Island Statistics: Past and Present is a comprehensive document which provides a wide range of statistical information on the people, economy, and government of Prince Edward Island. The eighty-seven tables in this publication contain historical and recent data compiled at the provincial level. The data cover most of the 20th century and, in some tables, the information goes back to even earlier. *Prince Edward Island Statistics: Past and Present* will serve as a basic reference document and an indispensable source of information to people interested in knowing more about the province.

The statistics presented in this publication were compiled by the Economics, Statistics and Fiscal Analysis Division of the Department of Finance and were obtained from a variety of sources. These include Statistics Canada, provincial government departments, and the Conference Board of Canada.

Gilbert R. Clements,
Minister of Finance

PREFACE

The preparation of *Prince Edward Island Statistics: Past and Present* results from a need for data on the province's long term development. Statistics covering only the past two to ten years are inadequate for examining the long term economic and social trends for the Province. Statistical series in the report are available back to 1921 in many cases and, in some instances to even earlier. Where possible, series were traced back to their origins but, in some cases, changing definitions and changing presentations of tables made this difficult.

The data has been brought up to 1989 where possible. Census data goes to 1986, the date of the most recent census conducted. For statistics on more recent years, please refer to the *Annual Statistical Review*, as it has not always been possible to incorporate recent revisions into the publication.

The production of *Prince Edward Island Statistics: Past and Present* has involved the talents and dedication of various staff members of the Economics, Statistics and Fiscal Analysis Division. A preliminary effort several years ago (*Prince Edward Island Historical Statistical Review*) was the result of work by Charlotte Gorrill, Terry Hogan and Ada Lowther. The publication as it now appears was primarily the work of Janice MacDonald and Nichola Cleaveland. This publication has been a major undertaking for the Division because of its size and scope, and would not have been possible without the valuable efforts of the individuals mentioned above.

Appreciation is also extended to Doreen Pound and Anne MacMicken, from the office of the Queen's Printer and Baxter Ramsay, Audio Visual for their valuable assistance in the production of this publication.

The majority of the data contained within this publication comes from Statistics Canada. This federal agency serves as the source for a wide variety of statistical information, including census data. Without access to data from Statistics Canada, production of a publication such as *Prince Edward Island Statistics: Past and Present* would not be possible. In addition, several provincial departments have provided data for this publication.

(2) Based on definition for Urban and Rural used in 1956.

(3) Based on definition for Urban and Rural used for 1961-1986.

(4) Farm population from census data. Due to changes in the definition of a Census Farm for the 1976 census, the figure for population on farms in 1976 is the definition of an Agricultural Holding. For 1986 it refers to members of the households of farm operators living on their farms for any length of time during the 12 month period prior to the census.

Note: Totals may not add due to rounding.

Note: Industries for 1951 and 1961 were adjusted on the basis of the 1970 Standard Industrial Classification. Some adjustment of the 1971 grouping was necessary to obtain comparable data.

Note: The 1986 Industry data (based on 1970 SIC) allow direct comparison between 1986 and 1981. Comparisons with 1971 industry data can be made since the classification systems are comparable, but it should be noted some differences exist in the definitions of the Labour Force.

Note: Industry data for 1951 and 1961 are based on 100 % sample. Industry data for 1971 are based on 33 1/3 % sample. Industry data for 1981 and 1986 are based on 20 % sample.

Note: In April 1983 Statistics Canada implemented a new survey of Employment Earnings and Hours. As a result of this new survey, employment data after April 1983 are not comparable to previous Estimates of Employees. For more information on these changes see the March 1983 Supplement to Catalogue 72-002, Employment, Earnings and Hours.

Adjustments to SEPH data for the period 1983-1986 are required when making comparisons with estimates beginning in 1987. Information on these adjustment factors was published in the May 1987 issue of Catalogue 72-002, Employment, Earnings and Hours.

(1): Data for the 1957-1969 period are compiled on the basis of the 1960 Standard Industrial Classification; for 1970 to 1982 on the 1970 Standard Industrial Classification and for 1982 and subsequent years, on the 1980 Standard Industrial Classification.

(2): From 1970-1981 inclusive, the cost of fuel and electricity was not collected separately for small establishments and was included in the cost of materials and supplies.

(3): Beginning with 1961, when statistics were first published for "Manufacturing Activity" and "Total Activity", data on "TOTAL Employees" and "Total Salaries and Wages" are not directly comparable with earlier statistics under the same headings.

(4): Data for 1982 restated to the 1980 revision of the Standard Industrial Classification.

Note (1): Components will not add to totals because no Provincial revenue distribution is available for Federal Campgrounds.

Note (2): From 1980-1982 Tourist Homes were included in either the Tourist Courts and Cabin or Tent and Trailer Campgrounds depending on their size. See 63-204, 1980 for definition locations used.

Note (3): Beginning in 1985, hotels and motels were asked to identify their business as a hotel or motel. This resulted in some changes to the classification of surveyed units. Data for hotels and motels have been aggregated because these classification changes made the seperate estimates unreliable between 1984 and 1985.
